Education

Lovely Professional University

Bachelor of Technology – Computer Science and Engineering

Expected May 2027

Phagwara, Punjab

Experience

FounDev Studio

Apr 2025 - Nov 2025

Backend Developer Intern

Remote

- Implemented backend services using Node.js and Java in three production applications, namely school management system, Internet of Things (IoT) based application, and stock analytics system.
- Created PostgreSQL and MongoDB database schemas and improved SQL queries to provide over 15 REST API endpoints.
- JWT authentication was integrated into Razorpay, Stripe, and AWS systems to facilitate authentication and transactions in the applications.

Projects

ZenithFlow | TypeScript, Next.js, Express.js, PostgreSQL, Supabase | [Live Link](#)

2026

- Created an extensive full stack productivity suite which includes more than ten modules for tasks, notes, finances, habits, and AI coaching.
- Designed subscription plans along with user authentication using PostgreSQL Row-Level Security and supported with AI assistance.
- Launched a Progressive Web App with offline support for desktop and mobile.

PDF Assistant RAG | Python, FastAPI, LangChain, ChromaDB, Docker | [Live Link](#)

2026

- Developed a RAG assistant using an open-source modular approach for retrieval and LLM services, getting over 40 stars on GitHub, over 100 forks, and over 80 contributors.
- Used Sentence Transformers embedding with cross-encoder for re-ranking, which helped us to reduce the number of chunks of retrieved context to 5.
- CI/CD pipeline automated with the use of GitHub Actions, including four security tools before deploying (Bandit, Trivy, Snyk, OWASP ZAP).

Deepfake Detection System | Python, FastAPI, PyTorch, OpenCV, Docker | [Live Link](#)

2026

- A deepfake detection system was constructed where 12 frames of video are extracted from each upload via OpenCV and PyTorch in $O(n)$.
- Swagger-documented REST APIs that return confidence scores were used to expose the model.
- Encapsulated the application using Docker and made eight production releases.

Technical Skills

Languages : Java, Python, C++, TypeScript, JavaScript, SQL
Backend : FastAPI, Express.js, Node.js, REST APIs, JWT, Microservices
AI / ML : PyTorch, LangChain, Hugging Face, ChromaDB, Scikit-learn
Databases : PostgreSQL, MongoDB, Supabase
Cloud & Tools : AWS, GCP, Docker, Git, GitHub Actions, Linux

Certifications

Associate Cloud Engineer: Google Cloud Sep 2026
Certified AI Foundations Associate: Oracle May 2026
AWS Machine Learning Foundations: Amazon Web Services June 2025
GitHub Foundations: Github Jan 2025

Achievements

LeetCode: Completed over 250 problems on data structures and algorithms using Python and C++.

EncryptEdge: Community Lead, coordinated in excess of ten technical workshops, cyber security events, and Capture The Flag contests.

GirlScript Summer of Code 2026: Led an open source project for GSSOC, managing workflows of 80 contributors using branch protection, PR/issue templates, and CODEOWNERS auto review assignments.
